

## **Do you know...**

**70% of women who develop breast cancer do not have a family history or any other identifiable breast cancer risk factor.**

## **A new breast cancer risk assessment test**

Dr. James recommends this new test to help identify women at elevated risk of developing breast cancer. It is a 5-minute, noninvasive test that can be performed in this office as part of your annual checkup. It looks for abnormal cells in the breast ducts before they become cancerous.

The doctors believe the HALO™ is a very valuable tool to enable early detection of breast abnormalities. Finding breast cancer early is the key to avoiding a life threatening battle.

This test is so new that insurance companies are not yet paying for it. It will cost \$80 to include this test as part of your annual checkup. Would you like to include the HALO with your checkup today?

\_\_\_\_\_ Yes

\_\_\_\_\_ No If no, why? \_\_\_\_\_
